PROJECTS

ReliefSync – Smart Disaster Response Coordination System link	Jan' 26
- Designed and developed ReliefSync, a smart disaster response coordination platform to efficiently manage and allocate relief resources such as food, medical aid, and rescue teams during emergencies. - Implemented real-time disaster reporting, resource request tracking, and intelligent resource allocation to improve coordination and response efficiency during disaster situations.	
Tech Stack: React.js, Node.js, Express.js, PostgreSQL, JWT Authentication, CSS.	
Rainfall Pattern Analysis using Unsupervised Learning link	Nov' 25
- Developed an Unsupervised Learning-based Rainfall Pattern Analysis System to identify hidden patterns and trends in historical rainfall data for better climate insights. - Applied clustering techniques (e.g., K-Means / hierarchical clustering) and data preprocessing using Python, Pandas, and Scikit-learn to group similar rainfall patterns and analyze regional rainfall behavior.	
Tech Stack: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook.
